cognizant

Technoverse Hackathon 2026

Industry Themes

Industry	Theme	Example
Banking	Lending & Credit	Use AI to speed up and standardize loan decisions by auto-checking documents, risk, and compliance.
Banking	Fraud Detection	Detect and stop fraud in real time across logins and payments while reducing false alarms for genuine users.
Banking	Personalised Banking	Provide every customer with tailored financial guidance based on spending, savings, and goals-inside the banking app.
Banking	Open Banking & APIs	Monetize banking capabilities via secure APIs-creating a platform where partners can build and pay for services.
Banking	Payments Modernisation	Upgrade legacy payment rails to instant, lower-cost, globally compatible payments with built-in compliance.
Insurance	Underwriting Automation	Automate underwriting by letting AI read inputs and recommend premiums, while routing complex cases to humans.
Insurance	End-to-End Claims Automation	Settle straightforward claims in minutes using AI for validation, payout estimation, and payment-without manual handling.
Insurance	Usage-Based Insurance	Price insurance dynamically using real behaviour data (telematics, wearables, IoT), not just demographics.
Insurance	Embedded Insurance	Offer insurance inside partner journeys (checkout/booking) with instant pricing, issuance, and integration via APIs.
Insurance	Catastrophe Risk Modelling	Improve disaster prediction and pricing by combining climate, geospatial, and loss data into explainable models.
Healthcare	Prior Authorisation Automation	Automate treatment approvals by checking clinical documentation against payer rules to reduce delays in care.
Healthcare	Clinical Documentation	Generate doctor notes automatically from consultations (with consent) to cut admin time and reduce burnout.
Healthcare	Interoperability	Enable secure, consent-based sharing of patient records across providers and payers using standards like FHIR.
Healthcare	Readmission Prevention	Predict readmission risk using EHR + social factors and trigger early follow-up interventions after discharge.
Healthcare	Value-Based Care Analytics	Provide real-time dashboards to track quality metrics, spot care gaps, and improve outcomes at population level.

Life Sciences	Drug Discovery	Use AI to propose and prioritize drug candidates by predicting efficacy, safety, and manufacturability earlier.
Life Sciences	Decentralised Clinical Trials	Run trials remotely with digital consent, wearables, telemedicine, and home participation-while staying compliant.
Life Sciences	Pharmacovigilance	Automatically detect drug safety signals by scanning real-world data sources like records, literature, and reports.
Life Sciences	Digital Biomarkers	Turn wearable/device signals into clinically accepted measures that prove treatment impact in trials and care.
Life Sciences	Regulatory Intelligence	Speed up regulatory submissions using AI to draft, cross-check, and ensure alignment with current guidelines.
Retail	Unified Commerce	Synchronize inventory, pricing, promotions, and customer data across stores, web, and apps for seamless journeys.
Retail	AI-Driven Merchandising	Use AI to optimize assortment, replenishment, and markdown timing to reduce waste and increase sales.
Retail	Hyper-Personalisation	Generate individualized offers and recommendations using customer behaviour data—at scale and with privacy guardrails.
Retail	Supply Chain Resilience	Detect supplier disruptions early and model downstream impact to prevent stockouts and protect revenue.
Retail	Smart Store Operations	Use sensors and computer vision to improve shelf availability, queue management, and loss prevention with less effort.
Manufacturing	Industrial Edge AI	Run AI directly on factory-floor devices for ultra-fast defect detection, anomalies, and process adjustments.
Manufacturing	Digital Twin	Build a live virtual replica of factory operations to simulate changes and optimize throughput without disruption.
Manufacturing	Automated Quality Inspection	Automate inspection using vision/sensors to catch defects at line speed and feed actionable quality analytics.
Manufacturing	Predictive Maintenance	Predict machine failures from sensor patterns and schedule maintenance early to avoid costly unplanned downtime.
Manufacturing	Sustainable Manufacturing	Track energy and material waste in real time and use AI recommendations to reduce cost and emissions.
Communications, Media & Technology	Network Automation	Create self-healing networks that predict issues and auto-tune parameters before users experience outages.

Life Sciences	Drug Discovery	Use AI to propose and prioritize drug candidates by predicting efficacy, safety, and manufacturability earlier.
Communications, Media & Technology	GenAI for Content Creation	Help creators produce and localize content faster using AI for scripting, translation, assets, and personalization.
Communications, Media & Technology	5G Monetisation	Build enterprise 5G services (private networks, slicing, edge apps) and monetize them as a managed platform.
Communications, Media & Technology	Churn Prediction & Retention	Predict who will leave early and trigger targeted retention actions based on real drivers like price or quality.
Communications, Media & Technology	Privacy-First Advertising	Improve ad targeting and measurement without cookies using privacy-preserving data and better attribution methods.
Utilities & Energy	Grid Modernisation	Manage solar, wind, batteries, and EVs with smart orchestration so the grid stays stable as renewables grow.
Utilities & Energy	Predictive Asset Maintenance	Predict equipment failures using sensor + weather data to prevent outages and optimize crew maintenance schedules.
Utilities & Energy	Carbon Accounting & Reporting	Automatically calculate emissions across operations and generate audit-ready sustainability disclosures and scenarios.
Utilities & Energy	AI-Driven Energy Trading	Use AI to optimize energy buy/sell decisions by combining forecasts for weather, demand, and market prices.
Utilities & Energy	Demand Response	Reduce peak load by nudging customers to shift usage with incentives, smart meter insights, and impact measurement.
